### Retrofittable for all 2.45 lifts

The lift is suitable for small cars up to large upper-class limousines such as the S-class or 7 series BMW.

It offers the invaluable advantage to use the same lift with swivel arm chassis as well as wheel grab system. This creates a workspace with two areas of application and a workshop without additional space requirements equipped for changing e-batteries. Electronic or hybrid vehicles are lifted via the wheel grab system to ensure safe work under the vehicle. The fold-away wheel grabbers allow for usage of standard swivel arms for normal lifting at the lifting points.

And another important advantage: Even with this extension the distance between the posts stays the same.
